How to Find Benchmarks

Be aware all elevations are provided in NGVD29 datum.

The KMZ file is only a rough index; user MUST read the description on the benchmark monument data sheet for an accurate location of the benchmark.

Currently, a user can locate all benchmark sheets by 1st selecting "My WebLink", then "Browse"; then navigate to the 'Benchmarks' folder @ PWRecords > Records > Survey Data > Benchmarks .

User needs to permit Google Earth to allow a connection to the internet; this is in Tools→Options; click first on the General tab, secondly check the "Show Web…" box and thirdly, apply it.
